

EasySave v1.1

User Manual — Quick Start Guide

What is EasySave?

EasySave is a backup tool that lets you copy files from one location to another. You can create up to 5 backup jobs and run them from the command line or through the interactive menu. Starting with v1.1, you can choose whether daily log files are written in JSON or XML format.

What's New in v1.1?

Version 1.1 adds flexible log format selection. A new `LogFormat` setting in `config.json` lets you switch between JSON and XML logging via menu option 7. All other features from v1.0 remain unchanged.

System Requirements

- .NET 10.0 Runtime installed on your machine
- Windows 10 / Windows Server 2016 or later
- Read access on source directory, write access on target directory

Starting the Application

- Open a terminal and run: `EasySave.exe`
- Type a number and press Enter to navigate the menu
- Use option 2 to add your first backup job
- Use option 7 to change the log format (JSON / XML)

Menu Options

Option	Description
1	List all configured backup jobs
2	Add a new backup job (max 5) — name, source, target, type
3	Delete an existing backup job
4	Run a single backup job
5	Run all backup jobs sequentially
6	Switch language (English / French / Spanish)
7	Switch log format (JSON / XML)
0	Exit the application

Backup Types

- **Full** — copies everything from source to target every time, overwriting existing files.
- **Differential** — copies only new or changed files since the last backup.

Log Format

The log format is a global setting that applies to all jobs. You can change it at any time via menu option 7 or by editing the `LogFormat` field in `config.json` (`"Json"` or `"Xml"`). The daily log filename changes accordingly: `YYYY-MM-DD.json` or `YYYY-MM-DD.xml`.

Command-Line Mode

Pass a selector to skip the menu entirely:

- `EasySave.exe 1-3` → runs jobs 1, 2 and 3 sequentially
- `EasySave.exe 1;3` → runs jobs 1 and 3

Log File Locations

- Daily log: `%APPDATA%\EasySave\Logs\YYYY-MM-DD.json` (or `.xml`)
- Live state: `%APPDATA%\EasySave\State\state.json`
- Job config: `%APPDATA%\EasySave\config.json`

Support Contract

- 5/7, 8h – 17h. Updates included.
- Annual renewal with SYNTEC index revaluation.
- For assistance contact the ProSoft support team and provide your log file.
