

EasySave v1.0

Technical Support Document

1. Minimum System Requirements

Component	Requirement
OS	Windows 10 / Windows 11 (64-bit)
Runtime	.NET 8.0 Runtime
RAM	Minimum 512 MB
Disk	50 MB free space (excluding backup data)
Network	Optional — required for network drive backups

2. Installation

- No installer required. Copy EasySave.exe and EasyLog.dll to the same folder.
- Ensure .NET 8.0 Runtime is installed on the machine.
- The application can be run directly from any local, external, or network path.
- Do not place the executable in C:\Windows or C:\Program Files without admin rights.

3. File Locations

File	Location
Configuration file	%AppData%\EasySave\config.json
Language preference	%AppData%\EasySave\lang.txt
Daily log files	%AppData%\EasySave\Logs\YYYY-MM-DD.json
Real-time state file	%AppData%\EasySave\State\state.json

Note: %AppData% resolves to C:\Users\<username>\AppData\Roaming on standard Windows installations.

4. Log File Format

Each entry in the daily log file contains the following fields:

- Timestamp: date and time of the file transfer
- Name: name of the backup job
- FileSource: full UNC path of the source file
- FileTarget: full UNC path of the destination file
- FileSize: size of the file in bytes
- FileTransferTime: transfer duration in milliseconds (negative value = error)

5. State File Format

The state.json file is updated in real time and contains one entry per backup job:

- Name: job name
- State: ACTIVE or INACTIVE

- TotalFilesToCopy / TotalFileSize: overall job scope
- NbFilesLeftToDo / SizeLeftToDo: remaining work
- Progression: percentage complete (0-100)
- SourceFilePath / TargetFilePath: current file being processed

6. Known Limitations

- Maximum of 5 backup jobs in v1.0.
- Sequential execution only — no parallel jobs.
- No encryption in v1.0.
- Console interface only — no graphical interface in v1.0.

7. Support Contact

For technical issues, contact the ProSoft support team and provide the log file located at %AppData%\EasySave\Logs\.
