

EasySave v1.0

Release Note

Software Overview

EasySave v1.0 is the first official release of the EasySave backup software developed by ProSoft. This version provides a command-line interface for managing and executing backup jobs on Windows systems.

What's New in v1.0

Backup Jobs

- Create up to 5 backup jobs, each with a name, source directory, target directory, and type.
- Full backup: copies all files from source to target.
- Differential backup: copies only files modified since the last backup.
- Supports local drives, external drives, and network (UNC) paths.
- Recursively backs up all files and subdirectories.

Command Line Interface

- Interactive menu for managing and running jobs.
- CLI argument support: EasySave.exe 1-3 runs jobs 1 through 3.
- CLI argument support: EasySave.exe 1;3 runs jobs 1 and 3.

Multilingual Support

- Full support for English and French.
- Language can be changed at any time from the menu.
- Language preference is saved between sessions.

Daily Log File (EasyLog.dll)

- A daily JSON log file is created automatically in %AppData%\EasySave\Logs\.
- Each file transfer is logged in real time with timestamp, paths, size, and transfer time.
- Negative transfer time indicates a file copy error.
- The logging feature is implemented in a reusable library: EasyLog.dll.

Real-Time State File

- A state.json file is updated in real time during backup execution.
- Tracks progress, files remaining, current file, and job status per job.
- Located at %AppData%\EasySave\State\state.json.

Configuration

- All job configurations are saved to a JSON file in %AppData%\EasySave\config.json.
- No hardcoded paths — fully compatible with customer server environments.

Technical Details

Property	Value
Version	1.0.0
Release date	April 2026
Framework	.NET 8.0
Language	C#
Interface	Console (CLI)
Log format	JSON
Max backup jobs	5

Known Limitations

- Maximum of 5 backup jobs — will be removed in v2.0.
- Console interface only — graphical interface planned for v2.0.
- No file encryption — planned for v2.0.
- No business software detection — planned for v2.0.
- Log files in JSON format only — XML support planned for v1.1.

Upcoming in Next Versions

- v1.1: Choice between JSON and XML log file format.
- v2.0: Graphical user interface (MVVM), unlimited jobs, file encryption via CryptoSoft, business software detection.
