What is EasySave?

EasySave is a backup tool that lets you copy files from one location to another. You can create up to 5 backup jobs and run them from the command line or through the interactive menu.

Starting the application

- Double-click EasySave.exe, or open a terminal and type: EasySave.exe
- To run job 1: EasySave.exe 1
- To run jobs 1 to 3: EasySave.exe 1-3
- To run jobs 1 and 3: EasySave.exe 1;3

Menu options

Option	Description
1	List all configured backup jobs
2	Add a new backup job (name, source, target, type)
3	Delete an existing backup job
4	Run a single backup job
5	Run all backup jobs sequentially
6	Change language (English / French)
0	Exit the application

Backup types

- Full backup: copies all files from source to target every time.
- Differential backup: copies only files that have changed since the last full backup.

Log and status files

- A daily log file is automatically created in: %AppData%\EasySave\Logs\
- A real-time status file is updated during backup at: %AppData%\EasySave\State\state.json

Changing the language

Select option 6 in the menu and type 'en' for English or 'fr' for French or 'es' for Spanish . The language is saved and remembered next time.
